Level 1	Level 1	Level 1	Level 1

Cal OES COASTAL REGION

- Nothing significant to report.

Cal OES INLAND REGION

Train Derailment, Roseville, Placer County, Hazardous Materials Spill Report: 16-7260

- On 12/03/16 at 0302 hours, Union Pacific Railroad (UPRR) advised that two locomotives collided resulting in the upright derailment of one of the locomotives.
 - The derailment caused the release of diesel onto the ballasts.
 - There were no injuries to crew or passengers.
 - Notifications were made per SOP.

Cal OES SOUTHERN REGION

Train Derailment, Bloomington, San Bernardino County, Hazardous Materials Spill Report: 16-7258

- On 12/02/16 at 2204 hours, Union Pacific Railroad (UPRR) advised that an unloaded flat railcar derailed upright during humping operations. There was no train involvement, only the railcar.
 - UPRR personnel are working to re-rail the car.
 - There was no hazmat release and no injuries to crew or passengers.
 - Notifications were made per SOP.

Service Interruptions:

- None reported.

Remote/Community Isolations:

- None reported.

WEATHER OF CONCERN

Weather of Concern

Central California

- Portions of the San Joaquin Valley will experience below freezing temperatures this morning.

Southern California

A strong Santa Ana wind event will bring strong and widespread northeast winds through this evening.

- In the Los Angeles and Ventura County mountains, widespread damaging wind gusts of 60 to 80 mph are expected, while coastal and valley areas will likely see damaging wind gusts of 40 to 60 mph.
- A strong Santa Ana wind event will impact areas from metro Orange County to the Inland Empire and the adjacent mountains and passes.
- Red Flag Warnings in effect until 1800 hours this evening for areas in Los Angeles, Ventura, San Bernardino, Riverside, Orange Counties.

Active Weather Warnings, Watches and Advisories by County:

http://www.wrh.noaa.gov/sto/brief/www_bc_cal.php

WEATHER SYNOPSIS BY REGION

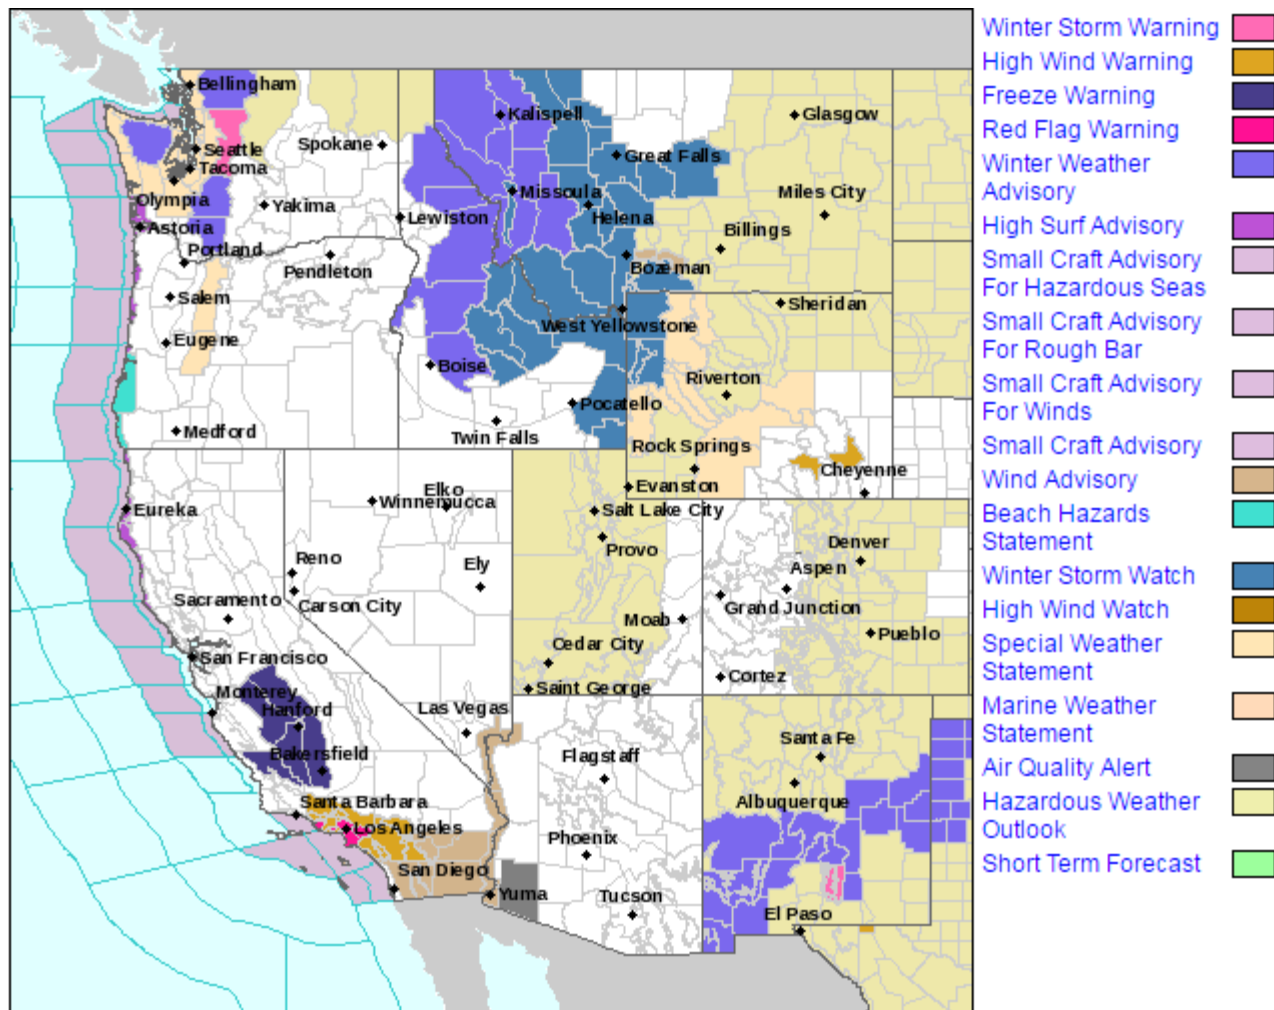

NORTHERN CALIFORNIA

Precipitation is not expected today, but there will be some mid and high clouds at times. High pressure will be the dominant feature, and some sheltered low spots will see strong inversions form, and low stratus and fog may develop. In the mornings, wind-prone areas from the western Sierra slopes to the coastal range will see north to northeast surface winds gust to 20-30 mph. Tomorrow, clouds and south to southwest winds will increase late in the day and overnight. Snow levels will be 4000-5000 feet. Most areas will just see more wind and clouds tomorrow, however, a second system will spread more light rain and snow across the northern half of Northern California Monday evening. Light rain will reach far Northwest Region of California Sunday morning and will spread during the day. Snow levels will be 2000-4000 feet. Stronger and wetter systems are expected toward the mid to latter parts of next week.

SOUTHERN CALIFORNIA

An area of low pressure over northern Baja California along with a mass of cold air to our northeast will generate gusty offshore winds today. Offshore pressure gradients and good upper level support will allow wind speeds to be quite strong during this event, especially in Los Angeles and Ventura Counties. Expect winds to increase further this afternoon when some gusts in excess of 65 mph possible. The strong upper level support may lead to the formation of wave clouds downwind from the San Gabriel and San Bernardino Mountains, leading to erratic wind gusts in adjacent valleys. Much weaker offshore winds of 10-20 mph will also be possible along the central coast. Temperatures will remain below normal throughout the duration of the event today with temperatures in the 40s in the mountains to the upper 60s to lower 70s in Southern California. The cold air will keep relative humidity (RH) values higher than the past few offshore wind events in the mountains, but the valleys will see readings around 15% this afternoon and as low as 10% Saturday. The winds will slowly decrease this afternoon and evening before ending altogether Sunday night. Temperatures may rebound a bit Sunday, but a few weaker troughs may keep conditions on the cool side through the middle of next week. Another, much weaker, offshore wind event may occur around next Wednesday. The next chance of rain may occur over central and northern California toward the end of next week, but no precipitation is expected over Southern California during the next 7-10 days.
